

BEET PULP SHREDS

WITH MOLASSES

When you choose Midwest Agri Beet Pulp Shreds you are buying an American made product supplied by farmers who grow sugarbeets throughout the Upper Midwest. Midwest Agri distributes Beet Pulp Shreds on behalf of over 4,500 shareholder/growers who produce the sugarbeets from which our Beet Pulp Shreds are made. The same care taken by our cooperative owners in producing pure natural white sugar goes into the production of the high quality feed found in every bag of Midwest Agri Beet Pulp Shreds. Thank you for choosing our product. If you have any questions or comments, please contact us through our website: www.mwagri.com

Direct from our Growers to you Beet Pulp Shreds offer a valuable feed resource for many types of livestock. Shreds are the fibrous portion of the sugarbeet that remains after the sugar is removed and are a highly digestible, extremely palatable fiber in a low-dust and easy-to-feed form.

Storage and Handling: Beet Pulp Shreds can be easily stacked and stored. Changes in temperature do not pose any risk providing reasonably dry conditions are maintained. When kept dry, they can be stored indefinitely.

Feeding Directions

Dry Feed: Mix with other feed ingredients.

Caution – rapid or excessive consumption of dry Beet Pulp may cause choking in some animals. The decision of whether and how to feed dry Beet Pulp to a specific animal should be made after discussion with your veterinarian or nutritionist.

Wet Feed: Soak Beet Pulp in water for two hours or until the pulp has absorbed enough water to expand. Soaked shreds can be mixed with other feeds as is or after excess water has been squeezed out of shreds.

Beet pulp, dried, molasses
For further mixing of feed.

Guaranteed Analysis:	
Crude Protein, minimum	6.00%
Crude Fat, minimum	0.30%
Crude Fiber, maximum	22.00%
